

Kickstarting AgentVault's First 50 Users

1. Target User Segments

A. Student Investors

Why them?

Students are curious about crypto and often try investing with small amounts of money.

They are open to testing new tools and giving feedback.

Pain Point

There is too much information online, making it difficult to know what matters. AgentVault can help by providing AI-powered insights in a simpler way.

Where I'd Find Them

- College blockchain clubs
- Discord communities
- Telegram groups
- LinkedIn student communities

B. Active Crypto Traders

Why them?

They already trade regularly and are always looking for tools that help them save time and make better decisions.

Pain Point

Keeping track of market trends, news, and trading opportunities takes a lot of effort.

AgentVault can help simplify this process.

Where I'd Find Them

- Crypto Twitter (X)
- Discord trading communities

- Telegram trading groups

2. Sample Outreach Message

Hi Praveen,

I noticed you're active in the crypto space.

I'm helping introduce AgentVault, an AI-powered crypto trading assistant that helps users discover market insights faster and spend less time researching.

We're currently looking for a small group of early users to test the platform and share feedback.

Would you be interested in trying it out?

Thanks,

Sanjana

3. Ideas to Get the First 50 Users

Idea 1: Campus Crypto Challenge

Partner with university blockchain clubs and offer early access to students who sign up and provide feedback.

Idea 2: Discord Beta Launch

Join crypto Discord communities and invite members to test AgentVault in exchange for early-access benefits.

Idea 3: Refer-a-Friend Program

Give early users rewards or special recognition for bringing in friends. This can help grow the first 50 users through word-of-mouth.

Why These Ideas?

They are low-cost, easy to execute, and focus on communities that are already interested in crypto. This makes it easier to get early users and valuable feedback quickly.
